

The Incredible Edible (and Organic!) Lube

So I might just be the **biggest fan of lube** around. I'm certainly the biggest lube advocate I know! I've tried a good number of lubricants over the years and the one that I just gave a go is magic.

It's called **Aloe Cadabra**. Isn't that cute? It's all natural and contains 95% organic aloe vera. Yup, the same stuff you slather on your skin to make it silky. Turns out, the good stuff works just as well when moisturizing *other* parts of your body.

The lube is smooth as can be and what I love about it is that it feels really clean. Many lubes can feel gummy or sticky, especially after a rigorous round of hooking up. This one, however, absorbs into skin pretty quickly and doesn't leave a residue at all. I gave it a test drive with **toys** (psst! I'll be chatting about a very exciting one tomorrow!) and with **condoms** and it was just peachy. And for those who fancy **handier moves**, I tried out this fun experiment: I slathered up my hands and rubbed them together hand-santizer-style. Afterwards, my hands felt soft, natural and normal. There was no weird after smell or sticky residue. Plus, it's safe to use for **oral sex**; the flavors are light and subtle.
